

Economics

- We have to create fair playing fields for all, especially local and family owned businesses. We need to expose and stop trickle-up economic policies.
- We have to curtail and eventually eliminate the system fueled by special interests that creates these unfair playing fields. We have to expose the sweetheart deals between the super-rich and congress that funnel the money upward through they system, from you and me, into their pockets.
- Business should exist for the betterment of people, not people existing for the betterment of business, as has become the modern philosophy.
- I will oppose and expose practices that allow US corporations to move their operations offshore for the purpose of avoiding taxes, and result in higher taxes for everyone else. I will also oppose practices that provide corporate executives tax free salaries and benefits, thus raising the taxes of everyone else, while removing capital available for reinvestment in the corporation.
- We need to eliminate the special tax privileges for the super rich.
- A direct result of eliminating such inequities, including in the military-industrial complex, and resultant right-sizing of the military, would be the ability to a balanced federal budget.
